

FTS Real-Time Trader

The FTS Real-Time

Portfolio management that integrates what you teach

- ◆ Brings standard textbook material to life.
- ◆ Coverage of multiple currencies, stocks, equity and currency options, equity, currency, deposit and fed fund futures, commodity options and futures.

Analytical support in real time lets students easily apply what you teach

- ◆ Integrated support for optimal portfolios based on the single index model, intrinsic value models, option implied volatilities and "greeks", bond duration and convexity, implied LIBOR curves, and much more, all updated in real time.

Reporting capabilities give your students full control

- ◆ Complete position details, VWAP's, realized and unrealized profits and losses, complete trading history, performance reports, all at their fingertips, all in real-time.

Transform every lesson into a real world experience

- ◆ Integrated web support provides access to news, markets, and company specific information.
- ◆ Realistic treatment of margins and short sales.
- ◆ Program trading lets them place limit and stop orders re-balance their position dynamically (and does not require programming knowledge.)

Position Manager

What do I need to use it?

- ◆ Actually, very little to start with. We run four standard cases all the time, and you can simply use these. We provide the Real-Time data and handle all the back office operations. So you can get started right away.
 - ◆ The cases cover stocks, options, futures, and currencies.
You can use any or all of them in your classes.
- ◆ You have total flexibility to design and run your own cases from your trading room. We can help you design your case and advise you on data needs.
- ◆ If you don't have a trading room, we can set up a trading room capability for you that you can access from your office, home, or classroom.

What are the system requirements?

- ◆ The system can be run on any modern Windows® computer with internet access. Details are attached.

Can I try it out?

- ◆ Yes. Just go to www.ftsnet.com and try out the demos on our demonstration server. There are four different cases: stocks, options, futures, and currencies. The stock demo lets you manage a position in US stocks. The options case has a large set of index options. The futures case includes Eurodollar futures. The currencies case lets you explore covered interest parity. We encourage you to check out the analytics and reporting capabilities.

What does it cost?

- ◆ It is licensed as part of the FTS System, which includes the Real-Time Position Manager, the FTS Interactive Markets, and the FTS Modules. Current prices are in the attached flyer.

What about technical support?

- ◆ We offer technical support by phone, email, and via webcasts. We have been supporting our clients for over 20 years and take pride in dealing with issues quickly.

Do you provide any training?

- ◆ Yes. When you license the system, we help you (by phone, email, and webcast) install it and learn the basic mechanics of operating it. We can also advise you on integrating the system into your classes and help you develop cases that are suited to your needs. We run sessions at our booth at various conferences, for example at the FMA conference. If you contact us in advance, we can set up a special one-on-one training session for you at the next conference we will attend. We also provide on-site training at cost.

Anything else?

- ◆ Yes. Besides the software, our web site contains a large amount of teaching material, including online texts and lessons that you can use. This provides an easily accessible set of reference materials.
- ◆ Our system and materials are designed by professors with over 50 years of combined business school teaching experience. So we are not just about the software, just as important to us is enabling you to use it effectively.
